one of the most profound insights of the dynamic systems perspective is that new structures resulting from the developmental process do not need to be planned in advance nor is it necessary to have these structures represented in genetic or neurological templates prior to their emergence rather new structures can emerge as components of the individual and the environment self organize that is as they mutually constrain each other s actions new patterns and structures may arise this theoretical possibility brings into developmental theory the important concept of indeterminism the possibility that developmental outcomes may not be predictable in any simple linear causal way from their antecedents this is the first book to take a critical and serious look at the role of

indeterminism in psychological and behavioral development what is the source of this indeterminism what is its role in developmental change is it merely the result of incomplete observational data or error in measurement it reviews the concepts of indeterminism and determinism in their historical philosophical and theoretical perspectives particularly in relation to dynamic systems thinking and applies these general ideas to systems of nonverbal communication stressing the indeterminacy inherent to symbols and meaning making in social systems several chapters address the issue of indeterminism from metaphorical modeling and narrative perspectives others discuss those indeterministic processes within the individual related to emotional social and cognitive development

this book explores the social forces among and between online aggressors that affect the expression and perpetration of online hate its chapters illustrate how patterns of interactive social behavior reinforce magnify or modify this expression it also considers the characteristics of social media that facilitate social interactions that promote hate and facilitate relationships among haters bringing together a range of international experts and covering an array of themes including woman abuse antisemitism pornography radicalization and extreme political youth movements this book examines the specific social factors and processes that facilitate these forms of hate and proposes new approaches for explaining them cutting edge interdisciplinary and authoritative this book will be of interest to sociologists criminologists and scholars of media communication and computational social science alike as well as those engaged with hate crime hate speech social media and online social networks

centering its study around three explanatory variables actors institutions and ideas this book argues that russia s hybrid institutional environment reduces the competition of policy ideas both at the stage of policy elaboration by the community of state and non state policy experts and also at the stage of policy adoption by parliament

this textbook considers understanding social processes to be the main task of sociology from this perspective its authors demonstrate and explain problems which they consider to be crucial for contemporary social science these are topics of a theoretical and epistemological nature which are nevertheless closely connected with social development and issues arising from it the book moves from the more general theoretical questions and dilemmas raised by key social thinkers such as those connected with the concepts of actor agency

institutions structures and systems it then leads to theoretical reflections on long term developmental processes associated with the phenomena of power and life in current societies including globalization identities migration etc it provides a comprehensive approach to the essential questions of sociology lucidly written and including the latest sociological perspectives this book will find wide appeal among social science students and researchers and is also for the socially aware general reader
